Features

- Integrating three core functions: special-shaped punching, multi-color embroidery and rotary sewing, it breaks through technical limitations with freely customizable patterns and flexible combination of punching, embroidery and sewing processes, easily realizing multi-process matching production.
- The special-shaped rotary punching head is compatible with a variety of special-shaped punching cutters, covering round, square, rectangular, triangular, elliptical and diamond holes with a hole diameter range of 0.8mm to 10mm, meeting diverse punching requirements.
- The 9-color precision embroidery head for leather features high embroidery accuracy, rich color layers and strong pattern three-dimensionality, perfectly adapting to the technical characteristics of leather materials.
- The sewing head specially developed for leather is matched with a precise feeding mechanism to ensure uniform and neat stitches. The head can rotate at any angle to guarantee forward stitch formation during sewing; it can be lifted up to 50mm, providing ample feeding space for easy and labor-saving operation. The presser foot is independently driven by a motor, and its height can be set in the operating system to adapt to sewing requirements of different material thicknesses and stepped workpieces, ensuring consistent presser foot pressure.
- Key components are treated with DLC coating, featuring high surface hardness and wear resistance, which significantly extends the service life of the machine.
- The frame custom-built for integrated punching, embroidery and sewing processes adopts a high-strength structural design with excellent rigidity and stability, providing reliable support for precise linkage of multiple processes and operation of complex crafts.
- Equipped with an industrial vacuum cleaner that strongly absorbs leather scraps and prolongs the service life of punching heads.
- Optional: Professional pattern making software — RaiseAgain SewPerEmb CAD System
